

Clinical Laboratory Norfolk, VA

Project Information Detail

The Clinical Laboratory at Children's Hospital of The King's Daughters (CHKD) in Norfolk, Virginia provides critical specialized tests for children and teens using state-of-the-art technology. This highly sought-after facility soon developed space needs, and CHKD realized they needed to expand their space. HBS provided laboratory transition planning and casework design support for this expansion.

The approximately 14,000 SF Clinical Lab located on the second floor of the hospital houses the core lab, microbiology and molecular lab, gross lab, pathology, transfusion, specimen collection and all support areas. Other expanded/renovated areas include office space, waiting, staff lounge and a conference room.

The project features an open floor plan and open sight lines which helps promote collaboration and encourages a smoother work flow for staff delivering care.

Healthcare Building Solution's scope of services included participation in owner/end user/support group planning meetings, drawing and equipment list review, site visits for utility inspections, assisting with site readiness checklist sign offs for equipment, moving and transition planning to minimize disruption of services and site visits during and post occupancy to track equipment issues and ensure successful resolution.
